## ► Milestone

Milestone is a way to track progress toward a specific goal or objective within a project. It groups multiple related issues or pull requests under a common goal, making it easier to organize and manage tasks.

Milestones help project managers and developers track progress and measure how close they are to achieving a particular outcome, like releasing a new feature or completing a version of the project.

The key features of Git milestones include grouping issues, tracking progress, deadlines, reporting, and filtering.

\*Grouping Issues: Related issues or pull requests can be grouped under a milestone to indicate they are part of the same objective.

\*Reporting: Milestones can provide reports and visual summaries of progress, making it easier to assess whether the project is on track.

\*Filtering: You can filter issues and pull requests based on the milestones they are associated with, making it easier to locate and manage tasks relevant to a specific milestone.

# Commit Emoji

02

## ► Commit Emoji

Commit emojis are visual symbols used in Git to represent the purpose of a change, such as fixing a bug, adding a feature, improving documentation, or refactoring code.

GitCommitEmoji.md

GitCommitEmoji

## ► Example

```
git commit -m "✨ ✨ Feat: Adding Widget (#1)"
```

✨ ✨ (Sparkles): Indicates that this commit introduces a new feature.

Feat: This is a conventional commit type that stands for "feature," indicating that the commit adds something new.

Adding Widget: A brief description of what the feature is.

(#1): The reference to the issue or task number (optional), which helps link the commit to an issue tracking system.

# ► Issue Number Reference in Commits

#26 [Fix] - 브랜드상품권 최대할인을 수정
